MedAssist

Project Appendix — UI Screenshots

This appendix presents annotated screenshots of each major screen in the MedAssist web application, illustrating the key features available to clinicians.

FIGURE A.1

Landing Page

The MedAssist marketing homepage targets clinicians, communicating core value propositions: AI-assisted consultation notes, patient history review, and natural-language record querying. Clean calls-to-action direct users to sign in or learn more.

FIGURE A.2

Doctor Dashboard

The main dashboard greets the clinician by name and surfaces key at-a-glance information: recent consultations with dates, recently viewed patient profiles, and a prominent call-to-action to begin a new consultation session.

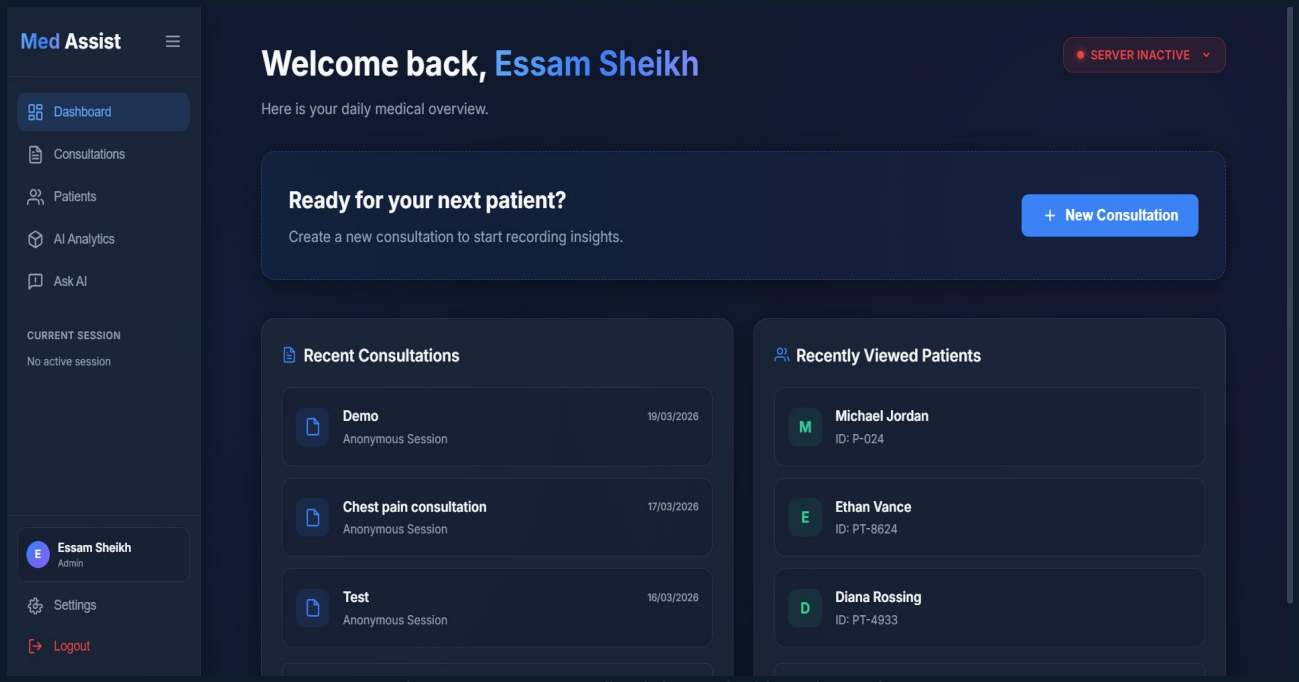

Figure A.2 — Personalised doctor dashboard overview

FIGURE A.3

Consultation Detail View

Each consultation record displays a timestamped transcript with speaker labels (doctor / patient) alongside an AI Insights panel. The panel supports both Manual and Live insight generation, producing structured summaries of the main problems, history, and planned investigations.

FIGURE A.4

Patient Records

The Patient Records screen provides a searchable grid of all registered patients, showing ID, gender, and date of birth at a glance. Clinicians can add new patients or navigate directly to any individual's clinical record from this view.

FIGURE A.5

AI Analytics

The AI Analytics page aggregates consultation data week by week. It presents a weekly activity summary (patients seen, consultations held) alongside an AI-generated narrative that surfaces recurring clinical themes and patterns across the selected period.

FIGURE A.6

Ask AI — Conversational Assistant

The Ask AI module lets clinicians query their own records using natural language. Patient-specific questions are answered with structured responses drawn from consultation transcripts and notes, with an appropriate disclaimer reminding users to verify AI output.
